Although Autodesk purchased a laser engraving company (Cad-a-Lite) in late 2006, Cad-a-Lite has a separate business as a computer-controlled machine shop. AutoCAD is available for use as a desktop application. The latest version is AutoCAD 2020, released in November 2019. The 2019 model offers improvements in tool and menu functionality and design flexibility. AutoCAD is commonly used for commercial-scale civil engineering design, including building blueprints, highway design, landscape design, and manufacturing drawings. AutoCAD was initially developed as a commercial CAD program for use by architects, engineers, and surveyors. Today, AutoCAD is also widely used for developing and using computer-aided manufacturing (CAM) systems. Because of the large number of features available in AutoCAD, some users may be overwhelmed by their choices and have difficulty in selecting and using the most appropriate feature or function. This article introduces some basic concepts to help readers to start with AutoCAD. The AutoCAD interface is similar to other CAD and drafting programs, but AutoCAD has some unique features that make it different from other products. In the middle of the screen is the drawing area, which is commonly referred to as the workspace. The drawing area is the area where users enter and display drawings. The lower-left corner of the screen is the status bar. This feature is common in most modern drawing programs and displays information about the active commands, objects, and features. The lower-right corner of the screen is the plotter, which is where the output of the drawing is displayed. If the user wants to print the plot, he or she selects the Print icon, and the output is displayed on the

I'm stuck on something and hoping someone can help out. I need to remove a portion of a string, but it won't compile without warnings. #include #include using namespace std; int main() { string myString = "hello"; string firstString = myString.substr(0, 3); //Remove the first 3 characters cout but it didn't seem to work. It just said I'm missing a template parameter. EDIT: I need to remove the first 3 characters of my string and print the result. I'm thinking the string functions are a bit more specific than I know and they don't work like I want them to. A: Slicing a string is more complex than it may appear at first. ## What's New in the AutoCAD?

Markup Assist, a recently announced feature in AutoCAD 2023, will make it easier than ever for users to use printed paper or PDFs as reference for their designs. The new "Markup Assist" feature within AutoCAD 2023 will make importing and marking up papers, such as PDFs, that have been generated and downloaded from the Internet easy and fun. Designers will be able to easily mark up their designs, such as text or illustrations, right on the original paper. Markup Assist also makes it easy to compare original paper to imported text or graphics. Once designers have found differences between the paper and their drawings, they can copy and paste text or drawings onto their drawings to resolve the issue. Rapid Crop: Select a portion of a drawing, mark its corners, and then drag to the right or left to create a new selection. (video: 1:53 min.) Rapid Crop is a newly announced feature in AutoCAD 2023 that will allow you to quickly select and crop an area of a drawing and then mark the selected area with predefined information such as coordinate points, dimensions, text, or drawing objects.
